

Note 1.- Where values are not supplied by the manufacturers on their respective websites these cells are left blank. In some instances, earlier models of some wings were missing data, so these were filled in with relevant data from later versions of the same wing.

Note 2- The definition of a Speed Wing is a paraglider:

1. Designated by the manufacturer as a speed wing or speed flying wing or,
2. any wing listed in the NZHGPA speed wing data list as a speed wing or,
3. any other paraglider type wing of less than 18 m2 flat area flown at a wing loading of 7kg/m2 or more.
